Background

Eskom Distribution plays a critical role in delivering electricity to millions of customers, including small power users (SPUs) and prepayment users (PPUs). Eskom is facing a significant challenge due to energy losses and equipment failures caused by meter tampering, non-payment of electricity, and illegal connections.

The Distribution Grid Modernisation Programme is a strategic initiative by Eskom to modernize the grid infrastructure and address meter tampering and non-technical losses. The program proposes the widespread deployment of Advanced Metering Infrastructure (AMI) with smart meters across Eskom's customer base, aiming to improve data collection accuracy, operational efficiency, and reduce meter tampering. The smart meters must be sealed as per Eskom standard to prevent meter access by unauthorised persons. The meter seals are used in securing metering equipment within Eskom Distribution. They are critical for preventing tampering, ensuring revenue protection, and maintaining the integrity of metering installations.

The scope of work entails but not limited to the following:

THE SUPPLY AND DELIVERY OF TOOL-LESS SMART METER SEALS IN VARIOUS COLOUR VARIANTS (I.E., CLEAR, YELLOW, WHITE, ORANGE, BLUE, RED, AND GREEN), SUPPLIED IN PACKS OF 50 UNITS PER ITEM, USED IN SECURING METERING EQUIPMENT WITHIN ESKOM DISTRIBUTION. THESE SEALS ARE CRITICAL FOR PREVENTING TAMPERING, ENSURING REVENUE PROTECTION, AND MAINTAINING THE INTEGRITY OF METERING INSTALLATIONS. THIS WILL BE ON AN “AS AND WHEN” REQUIRED BASIS FOR THE DISTRIBUTION DIVISION. THE SEALS MUST COMPLY WITH ESKOM TECHNICAL EVALUATION REQUIREMENTS AND SPECIFICATIONS, INCLUDING PHYSICAL ATTRIBUTES, FIXING MECHANISMS, NUMBERING, AND MARKETING REQUIREMENTS.
